

# NOW READ ITS MIND.

## INVISION REMOTE MONITORING SYSTEMS

*Monitor and manage your vending machines from anywhere, at anytime.*

**Providing Affordable and Flexible Data Collection Communication.**

**Comments we've heard from our users:**

*"We've been interested in implementing wireless for a few years now but no one seemed to have it right. Now InOne does."*

*"InOne has really thought wireless through."*

*"InOne has the hardware to work in all my machines, even non-MDB and the know-how and integrity to back it up."*

*"INVISION helped me identify a problem with the machine and I was able to get there before the customer called me."*

**Immediate Access**

DEX Data and alarm status available directly from the vending machine via wireless communication.

**Low Monthly Cost**

Delivers multiple DEX readings per day for one low cost.

**Ease of Installation**

Plug and Play design insures ease of installation.

**Single Cellular Connect for all Machines in Area**

Use Skyport in conjunction with other Skyports or Oneports to relay information to a single outside line via RF signals.

**Increase Collections And Accuracy With Less Labor**

Determine machine visits and accurate detailed information on product requirements, while decreasing visits.

**Our Technology Provides the Flexibility Others Can't**

What may work in one location may not be reasonable in another. With Skyport you can use Cellular, Ethernet and Dial-Up to send data.

**Easily Expandable & Upgradeable**

Designed to be remotely upgradeable to minimize service visits. Expands to insure that future technology can be easily incorporated.

**Interface to Route Accounting Systems**

Provides data to Streamware's VendMax System and soon to others.

# INVISION

## REMOTE DATA COLLECTION SYSTEM

*Optimize the efficiency and profitability of your vending operation  
... WITH THE TECHNOLOGY AND ADVANTAGES OF WIRELESS.*

### INVISION Is Flexible and Simple

Whether you operate one route or 100, INVISION remote monitoring can help you. First of all, INVISION is an add-on. You do not have to abandon or change your current data communications system. INVISION works with your DEX, MDB and card reader hardware, as well as with your existing vending software and handhelds. INVISION has the ability to make your existing data systems more efficient and effective.

### Here's How INVISION Works ...

The Skyport is the basic INVISION component. It acts as a gateway, providing communication options such as cellular, ethernet and telephone modem. It is the reason that the INVISION system is so very flexible. With Skyport, your machines in an area, can be connected wirelessly to a Local Area Network (LAN) and the DEX data and machine alarms are transmitted wirelessly to your office or service personnel. In locations where cell or RF isn't feasible, the INVISION Skyport supports telephone communications while still providing the cost saving benefits of LAN technology.

Another component of the INVISION system is the INVISION Oneport. The Oneport communicates to the Skyport via RF, forming a web of machines. It allows the machines in an area to make use of the Skyport's features at a much reduced cost.

Yet another component of the INVISION system is the INVISION 485 Link. The 485 Link is a wired, RS485 device that connects machines that are directly next to each other. The 485 Links will then connect to either INVISION Oneport to be relayed via RF or directly to a Skyport to be transmitted to the INVISION server.

Once the data is transmitted to the INVISION server, the DEX data and alarms will be imported into the INVISION Management Software, our browser-based software. From there you can begin to benefit from InOne's MSM Technology and Manage Smarter Machines.

### INVISION Benefits Are Many...

The INVISION Remote Monitoring System enables you to control the business in a more complete and efficient manner. And everyone in the vending operation benefits -- including the route drivers and office and warehouse personnel; so do your customers. Such broad, continuous satisfaction will help boost success in operations and on the bottom line.

**InOne Technology 410.666.3800**

**NEW!** SMARTONE VMC controllers enable older snack machines to operate just like new ones, with MDB, DEX and guaranteed vend-sensing technologies, supporting existing DumbMech changers, bill validators, card readers and other systems. SMARTONE VMCs are optimized for remote data collection with proactive alarm notification and dual channel comms separating transactions from DEX. Easy to install and configure.

*InOne Technology does more than just provide you with new state-of-the-art products and support services. We provide vending operators and service managers with new, exclusive opportunities for greater efficiency, increased customer satisfaction, and greater profitability.*
